

What to Do About an

AIR CONDITIONER LEAKING WATER

It's no doubt that an air conditioner is essential for your home as it provides healthy air quality in the house and creates a comfortable living space. While water leaks are something that one never wants to experience, they do happen occasionally. So, what do you do if water comes out of your air conditioner? It's essential to act quickly if water leaks out of the AC unit.

WHAT TO DO

TURN OFF YOUR UNIT.

The first thing you should do if you find water leaking from your AC unit is turn the unit off. By turning off your AC unit, either at the thermostat or directly from the breaker panel, you are preventing further water from being created, and essentially stopping the leak until a service provider can get to your home.

CONTACT AN AC PROFESSIONAL.

Once you have turned the AC unit off, contact an AC professional so that they can come out to determine the cause of the water leak and get your unit back up and running.

THERE ARE A FEW STEPS

YOU CAN TAKE TO ATTEMPT TO PREVENT A LEAK FROM OCCURRING IN YOUR HOME

CHANGE YOUR AIR FILTERS REGULARLY

Regularly changing your AC filters helps keep the air flowing freely through your unit, improving the indoor air quality in the house. This is extremely important because proper airflow is essential for your HVAC unit to operate properly.

CLEAN THE CONDENSATE DRAIN LINE

Water leaks are often the result of your drain line becoming blocked. We recommend having your drain line cleaned 1-2 times per year to prevent build up. It's essential not to use harsh chemicals since this could cause damage to other parts of your AC unit. Contact AC Professionals.

These two items can be taken care of by signing up for a maintenance contract with Romeo Air, which can prevent a water leak from occurring in your home.
